This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

 (Currently amended) A method of transferring resource related information from a first mobile terminal to a second mobile terminal operating in a wireless communication network, comprising the steps of:

connecting the first mobile terminal to an external communication network for accessing a resource;

receiving a request from selecting, by a user of the first mobile terminal; for information relating to the resource that said user wishes to send to the second mobile terminal;

transporting the requested information to the first mobile terminal responsive to the request;

receiving a selection input from the first mobile terminal indicating the requested information to be transmitted to a second mobile terminal; and

negotiating a communication connection between the first and the second mobile terminals responsive to the selection input, the negotiating including the first mobile terminal establishing a communication connection with the second mobile terminal and the first mobile terminal;—and

transferring the resource related information to the second mobile terminal over the communication connection.

- (original) A method as claimed in Claim 1, wherein the second terminal is also a client of a server connected to the external network and the information facilitates access to an external network resource by the second terminal.
 - 3. (original) A method as claimed in Claim 1, wherein the information comprises a URL.
- (original) A method as claimed in Claim 2, wherein the information comprises browser settings for use by the second terminal.

5. (original) A method as claimed in Claim 1, wherein the information has been

previously downloaded from the external network.

6. (original) A method as claimed in Claim 5, wherein the information comprises a web

page.

7. (original) A method as claimed in Claim 1, wherein the negotiation of the connection

includes specifying the bearer to be used in transporting the information to the second terminal.

8. (original) A method as claimed in Claim 7, wherein the bearer is specified in

accordance with a pre-determined user preference.

9. (original) A method as claimed in Claim 1, wherein the connection is made via the

wireless communication network.

10. (original) A method as claimed in Claim 1, wherein the connection is made directly

between the terminals.

11. (previously presented) A method as claimed in Claim 10, wherein the connection

comprises an infrared link.

12. (original) A method as claimed in Claim 10, wherein the connection comprises a low

power radio frequency link.

13. (original) A method as claimed in Claim 1, wherein the negotiation of the connection

comprises sending a request from the first terminal to the second terminal for approval to

establish a connection between the terminals and on receiving approval from the second terminal

establishing the connection.

14. (original) A method as claimed in Claim 2, wherein both terminals are using a Wireless Application Protocol and the request is sent to the second terminal using a

connectionless push command.

15. (original) A method as claimed in Claim 14, wherein the connection is established

using a bearer indicated in the connectionless push command.

16. (original) A method as claimed in Claim 1, wherein the external network resource is a

server.

17. (original) A method as claimed in Claim 2, wherein both terminals are using a

Wireless Application Protocol and the resource information comprises a WAP deck.

18. (original) A method as claimed in Claim 17, wherein the transfer of the WAP deck to

the second terminal includes the step of substituting the WAP deck with a pre-existing WAP

deck on the second terminal.

19. (original) A method as claimed in Claim 18, wherein the pre-existing WAP Deck is

deleted following the substitution step.

20. (original) A method as claimed in Claim 1, wherein the external network is the

Internet.

21. (Currently amended) A wireless communication terminal arranged to access an

external network resource via a wireless communication network, the wireless terminal

comprising a controller arranged to receive user-selected information related to a resource via the

wireless communication network and to send the an input of resource related information from to

another wireless terminal, selected by a user of the another wireless terminal wherein the controller is further arranged to negotiate a connection with the another wireless terminal and

subsequently to receive the information over the connection.

22. (original) A terminal as claimed in Claim 21, wherein the controller operates in

accordance with a Wireless Application Protocol.

23. (original) A terminal as claimed in Claim 22, wherein the controller is arranged to

receive the resource related information via a push command.

24. (original) A terminal as claimed in anyone of Claims 21, wherein the terminal is a

cellular radio telephone.

25. (Currently amended) A wireless communication terminal arranged to access an

external network resource via a wireless communication network, the wireless terminal

comprising a controller arranged to <u>receive user-selected information related to a resource via the</u> wireless communication network and to send the resource related information <u>selected by a user</u>

of the wireless communication terminal information to another wireless terminal, wherein the

controller is further arranged to negotiate a connection with the another wireless terminal and

subsequently to send the information selected by the user over the connection.

26. (original) A terminal as claimed in Claim 25, wherein the controller operates in

accordance with a Wireless Application Protocol.

27. (original) A terminal as claimed in Claim 26, wherein the controller is arranged to

send the resource related information via a push command.

28. (original) A terminal as claimed in anyone of Claims 25, wherein the terminal is a

cellular radio telephone.

29. (previously presented) The method according to claim 1, wherein the external

communication network comprises the Internet.

Page 5 of 11

- 30. (previously presented) The method according to claim 1, wherein the information related to the resource comprises content of the resource.
- 31. (previously presented) The method according to claim 1, wherein the information related to the resource comprises a link to the resource.
- 32. (previously presented) The method according to claim 1 further comprising choosing a bearer for sending the resource related information.
- 33. (previously presented) The method according to claim 1 further comprising selecting the second mobile terminal based on a list providing association between terminal contact information and recipient information.
- 34. (previously presented) The method according to claim 1, wherein the second mobile terminal is not capable of handling the external resource contents.
- 35. (previously presented) A method of transferring resource related information from a first mobile terminal to a second mobile terminal operating in wireless communication network, comprising the steps of:

connecting the first mobile terminal to an external communication network for accessing a resource:

selecting, by a user of the first mobile terminal, information relating to the resource that said user wishes to send to the second mobile terminal:

negotiating a communication connection between the first and the second mobile terminals: and

transferring the resource related information to the second mobile terminal over the communication connection.

wherein both the first and second mobile terminals use a Wireless Application Protocol (WAP) and the resource related information comprises a WAP deck, the transfer of the WAP deck to the second terminal including substituting the WAP deck with a pre-existing WAP deck

Appln. No.: 09/838,147 Reply to Office Action of March 8, 2006

on the second mobile terminal, the pre-existing WAP Deck being deleted following the substitution.
